

# **Revision policy for the Savings Barometer FM0105 210527**

# Specification of certain applications of Statistics Sweden's revision policy in the Savings Barometer

The Savings Barometer, published one month before the Financial Accounts, presents a preliminary calculation of the household sector. It is a subset of the Financial Accounts, and the calculation only includes the most recently concluded quarter. In the Savings Barometer publication, the most recent publication of the Financial Accounts is used as a basis for data on previous quarters. This means that when the Savings Barometer is published, the previous quarter in the Financial Accounts and the Savings Barometer are identical. Information on the revisions carried out in conjunction with the publication of the Financial Accounts is available in the relevant statistics news.

## Exceptions

### *Errors in previous calculations*

Errors in previous calculations are handled in accordance with Statistics Sweden's error management procedures.

### *Other sources of revision*

If the Savings Barometer needs to be revised, this will be announced in the statistical news in conjunction with publication.
