GENDER EQUALITY

means that women and men have equal power to shape society and their own lives. This implies the same opportunities, rights and obligations in all spheres of life.

Gender equality – equality

In Sweden, *gender equality* is used to define the relationship between women and men. However, *equality* is a somewhat wider concept. It refers to parity in relations among all individuals and groups in society. Underlying this notion is the belief that all people are of equal value, regardless of sex, ethnic origin, religion or social class. Gender equality is one of the cornerstones of equality.

Gender equality has quantitative as well as qualitative aspects

The quantitative aspect implies an equal distribution of women and men in all areas of society, such as education, work, recreation and positions of power. If a group comprises more than 60 percent women, it is women-dominated. If men make up more than 60 percent of a group it is men-dominated. *Qualitative gender equality* implies that the knowledge, experiences and values of both women and men are given equal weight and are used to enrich and direct all spheres of society.

Gender equality in a 30-year perspective

This book makes comparisons 30 years back in time. For instance, what did things look like in 1985, 2000 and the most recent year available? The trends are described in both figures and text. A summary of important changes is available on pages 4 and 5.

Swedish gender equality policy

The overall objective for gender equality policy is to ensure that women have equal power to shape society and their own lives. Among other things, this implies the following:

An equal distribution of power and influence

Women and men shall have the same rights and opportunities to be active citizens and be able to form the terms for decisionmaking.

Economic equality between women and men

Women and men shall have the same opportunities and conditions with regard to education and paid work that provide them with the means to achieve lifelong economic independence.

Equal distribution of unpaid care and household work

Women and men shall take the same responsibility for household work and shall have the same opportunities to give and receive care on equal terms.

Men's violence against women must stop

Women and men, girls and boys shall have the same rights and opportunities in terms of physical integrity.

Gender equality concerns all areas of society

To achieve gender equality in society, it is necessary to have a gender equality perspective in all areas. This strategy is called gender mainstreaming. This means that analyses of women's and men's, girls' and boys' situations and conditions shall be included in decision-making data, and that the consequences of the proposals are analysed with consideration to gender equality among women and men. Gender mainstreaming is based on the understanding that gender equality is created where the resources are distributed and decisions are made. Therefore a gender equality perspective must be incorporated in all decision making by the actors who normally take part in decision making.

GENDER EQUALITY SINCE THE 1980S

- Women still use the majority of days for parental allowance
- The employment rate was lower in 2013 than in 1987 but higher than 2000 for both women and men.
- Still a high percentage of part-time work for women, but it has decreased since 1987.
- The difference in women's and men's time for unpaid work decreases above all because unpaid time of women decreases.
- Small changes towards a less sex-segregated labour market.
- In upper secondary school women are moving towards programmes with a more even sex distribution, men towards the same as well as programmes that are women-dominated.
- Both women and men are increasing in numbers in all study orientations in higher education, except for education and teacher training where the numbers are decreasing.
- Differences in pay among women and men are nearly unchanged.
- Pensioners are increasing in numbers and live longer
 - women live alone to a greater extent than men
 - men have higher pensions than women
- More even sex distribution in the Parliament, but still more men than women

Some important facts

- In 1985 women took 94% of the days for parental allowance, men 6%. In 2013 women took 75% and men 25%.
- In 1987, the employment rate was 82% for women and 88% for men. In 2000 it was 76% for women and 81% for men, and in 2013 it was 77% for women and 82% for men.
- In 1987, 45% of the women worked part-time, 6% of the men. In 2013, 30% of the women worked part-time, 11% of the men.
- In 2010 women spend 3.5 hours on unpaid work during a weekday, men 2.5 hours.
- Women have reduced their amount of time spent on unpaid work since 1990 by 1 hour, while men have increased their time by 8 minutes.
- In 1985, 6% of the women and 5% of the men had occupations with an even distribution of the sexes. In 2012, 14% of the women and 13% of the men have such occupations.
- In 1986, 80% of the women and 23% of the men in upper secondary school were enrolled in women-dominated programmes. In 2013, the corresponding figures were 76% for women and 38% for men.
- In 1986, 21 000 women and 11 000 men graduated from universities and institutes of higher education. In 2013, the distribution was 47 000 women and 27 000 men. The distribution of the sexes was largely the same in both years.
- In 1994, women were paid 84% of what men were paid. In 2012 the figure was 86%.
- The average life expectancy in Sweden in 2013 is 84 years for women and 80 years for men. The corresponding figures for 1985 were 80 and 74 years respectively.
- In 1985, 31% of the Riksdag members were women and 69% were men. In 2010, the distribution was 45% women and 55% men.

National coordination of gender equality work

The Minister for Gender Equality coordinates the policies of gender equality in the Government. Each minister is responsible for gender equality in his/her policy area. *The Division for Gender Equality* is responsible, under the Minister for Gender Equality, for coordination of the Government's work on gender equality, special gender equality initiatives and development of methods to implement the Government's gender equality policy. There are *experts in gender equality issues* at every county administrative board. *The Office of the Ombudsman against Discrimination* sees that anti-discrimination legislation and the Parental Leave Act are followed. There is a *council against discrimination* that can impose employers and educators with fines if they do not take active measures to prevent discrimination, such as discrimination on grounds of sex.

Gender equality and statistics

Women and men should be visible in the statistics

For this to be possible, statistics must be disaggregated by sex. The Swedish Parliament has decided that gender statistics are to be a part of the official statistics. The goal is that all statistics concerning individuals shall not only be collected, analysed and presented by sex, but also reflect gender issues and problems in society. *Sex should be the basis for a comprehensive and thorough breakdown of all statistics.* In addition, statistics should be presented in such a way that they are easily accessible to users. In the Official Statistics Act (2001:100) there is a paragraph in the section "Accessibility": Article 14. *Official statistics related to individuals shall be disaggregated by sex, unless there are special reasons for not doing so.*

Statistics Sweden has produced advice and guidelines for work with statistics broken down by sex (CBM 2004:1). The book can be downloaded from Statistics Sweden's website. However, statistics broken down by sex alone are not sufficient for making analyses on gender equality. For this purpose it is also necessary to use statistics that illustrate gender equality issues in society.

Since 2012, Statistics Sweden's website has presented gender statistics in the form of indicators linked to the gender equality policy objectives as well as in-depth information in same areas. The statistics are updated yearly on two occasions.

Progress so far

- 1845 Equal inheritance rights for women and men.
- 1846 Widows, divorcees and unmarried women entitled to work in manual trades and some commerce.
- 1858 Unmarried women over 25 years old may attain majority by court order. Marriage means a return to minority status.
- 1859 Women entitled to some teaching positions.
- 1863 Unmarried women attain majority at the age of 25.
- 1864 Husbands lose legal right to strike their wives.
- 1870 Women gain right to take high school diploma at private schools.
- 1873 Women gain right to take degrees with some exceptions (doctorate in law and theology)
- 1874 Married women gain right to control their own incomes.
- 1884 Unmarried women attain majority at the age of 21.
- 1901 Women gain right to four weeks unpaid maternity leave.
- 1919 All women gain suffrage for municipal elections and the right to hold office at municipal and county levels.
- 1921 Women gain national suffrage and the right to hold office at the national level.

Married women attain majority at the age of 21.
The new marriage code gives wives and husbands equal legal status.
- 1922 The first five women were elected to Parliament.
- 1925 With some exceptions, women gain the same right as men to civil service jobs.
- 1927 Public upper secondary schools open to girls.
- 1931 Maternity insurance benefits introduced.
- 1935 Equal basic pensions adopted for women and men.

- 1938 Legalisation of contraception.
Child support assistance established. Financial assistance to mothers established. Universal maternity allowance established.
- 1939 Gainfully employed women may not be dismissed due to pregnancy, childbirth, or marriage.
- 1947 First woman Cabinet Minister: Karin Kock.
Equal pay for equal work for state employees.
Child allowances introduced.
- 1950 Both parents declared a child's legal guardians.
- 1951 Women entitled to retain their Swedish citizenship upon marriage to foreign citizens.
- 1955 Three months paid maternity leave for working women on birth of child.
- 1958 Women entitled to be ordained into the clergy.
- 1960 Employers and unions agree to abolish separate wage rates for women within a five-year period.
- 1964 Birth control pill approved in Sweden.
- 1965 Rape within marriage is criminalised.
- 1969 Compulsory schools adopt new curriculum. Encouraged to promote equal opportunities.
- 1970 Secondary schools adopt new curriculum. Encouraged to promote equal opportunities.
- 1971 Separate income tax assessment for wife and husband.
- 1974 Parents entitled to share parental allowances upon childbirth.
- 1975 UN's International Women's Year.
New abortion law: A woman has the right to decide until the 18th week.
- 1976 UN's Decade for Women. Ordinance for equal opportunities in civil service. Sterilisation Act: Person aged 25 decides her/himself.

- 1977 Agreement between employers and unions on equal opportunities.
- 1979 Right to six-hour day for parents of small children.
- 1980 Law against sex discrimination in employment.
Spouse-means test for student loan abolished.
Equal opportunities agreement with municipal and county governments. Compulsory schools adopt new curriculum - now required to promote equal opportunities.
New law on succession to the throne - monarch's first-born daughter or son succeeds to the throne.
- 1982 Assault on private property subject to prosecution.
Ban on pornographic "live shows" in places open to public.
Social security points for care in home of children under 3 years.
Public funds to women's organisations.
New name-change law - at time of marriage, couples decide which name they will use.
- 1983 New equal opportunities agreement between employers and unions.
- 1984 The State Sector Equal Opportunities Ordinance.
- 1985 UN's Decade for Women ends - strategies for the year 2000 adopted.
Equal opportunities agreement for public companies/utilities.
- 1987 New law concerning joint property of cohabiting couples (unmarried):
The Cohabitation Act.
- 1988 National 5 year plan of action to promote equal opportunities.
- 1989 Nordic plan of action to promote equal opportunities.
All occupations open to women, including armed forces.

- 1992 New Equal Opportunities Act.
- 1994 Revised Equal Opportunities Act.
New national policy for equal opportunities. Gender statistics made part of Sweden's Official Statistics.
- 1995 Sweden joins the European Union.
UN Fourth World Conference on Women in Beijing adopts a declaration and action plan for gender equality.
At least one month of parental leave must be used by mother and one by father.
Act on Registered Partnership.
- 1997 First woman bishop.
- 1998 Act on Violence against Women (amendment of Penal Code).
Act on Prohibition against Female Genital Mutilation.
The Equal Opportunities Act tightened concerning sexual harassment.
- 1999 Law prohibiting the purchase of sexual services.
- 2000 Special session of the General Assembly, Women 2000: gender equality, development and peace for the twenty-first century;
National Council for Peace for Women founded.
- 2001 A more stringent version of the Equal Opportunities Act came into force.
- 2002 Parental leave: number of days increases with 30 sickness benefit days to 480 days, 60 of which are reserved for each parent and cannot be transferred.
- 2003 Change in law on ban of visitation rights. The ban can also apply to the joint home.
- 2004 The Government adopts a strategy for gender mainstreaming into the Government Offices.
- 2005 New legislation on sexual crimes.

- 2006 Decision by Parliament on new objectives for gender equality policies.
- The European Council decides on a European pact for gender equality.
- European Parliament and European Council order for establishment of a European institute for gender equality.
- 2007 The Government presents a plan for action against men's violence towards women, honour-related violence and violence in same-sex relationships.
- 2009 Discrimination act entered into force. Combats, among other things, discrimination on grounds of gender, transgender identity or expression. Equal Opportunities Act ceases. A new agency, the Equality Ombudsman is formed and the Equal Opportunities Ombudsman ceases.
- Gender-neutral marriage law.
- The European Institute for Gender Equality is set up in Vilnius, Lithuania.
- 2011 Sweden signs the Council of Europe Convention on preventing and combating violence against women and domestic violence.
- 2012 Publishing on Statistics Sweden's website of gender statistics in the form of indicators, linked to the gender equality policy objectives.
- 2013 More cases of sexual exploitation punishable as rape because the concept of "helpless state" is replaced by the broader concept of "particularly vulnerable situation."
- 2013 The Government in its budget proposition 2014 proposed a system for an improved follow-up of the gender equality policy objectives.
- 2014 Nordic Forum on women's rights and gender equality.

Guide for readers

The information in this booklet has primarily been taken from Statistics Sweden's and other government agencies' statistical production. The source is given in conjunction with each table/graph. In most places, the tables and graphs give absolute numbers and/or proportions (%) for certain attributes, first among women and then among men. Proportions (%) are used in two ways:

- Proportion (%) of all women and proportion (%) of all men with certain characteristics, such as those working part-time.
- Distribution of sex within a group, such as teachers in secondary education.

Some area graphs reflect both the absolute numbers and sex distribution in various groups. Such graphs are shown in the section on Education, for example, the graph on complete upper secondary education on page 31. The area given each programme reflects the total number of students completing this programme compared to other programmes.

The total figures in the tables are not always in agreement with the partial figures because of rounding off.

The statistics which form part of Sweden's Official Statistics are marked with the special symbol . The Labour Force Surveys and the Living Conditions Surveys are included in the system for the official statistics. However, the tables and diagrams in this booklet are specially processed data and are therefore not official statistics.

For information on data quality, we refer to the sources quoted. See also Statistics Sweden's website: www.scb.se.

Explanation of symbols

- No observation (magnitude zero)
- 0 Magnitude less than half of unit.

POPULATION

Changes in population 1900–2013

Numbers in 1 000s and population rate (‰)

	Population		Live births		Deaths	
	Women	Men	Women	Men	Women	Men
1900	2 630	2 506	67	71	43	43
1925	3 081	2 973	52	55	36	35
1950	3 536	3 511	56	60	35	35
1975	4 127	4 081	50	53	40	48
2000	4 490	4 393	44	47	48	46
2013	4 831	4 814	55	58	47	44

	Immigrated		Emigrated		Annual growth rate (‰)	
	Women	Men	Women	Men	Women	Men
1900	4	4	10	10	7.3	8.0
1925	2	3	5	7	3.0	2.8
1950	16	12	7	6	8.7	8.7
1975	20	24	12	16	4.5	3.3
2000	29	29	16	18	1.9	2.9
2013	55	60	24	27	8.5	10.2

Source: Population Statistics, Statistics Sweden

At the beginning of the 20th century the population increased because the number of births exceeded the number of deaths. This was the case up until the middle of the 1970s. Nowadays immigration is the main reason that the population increases.

During the middle of the 20th century the number of immigrants rose. This is partly due to labour immigration during the 1950s and 1960s, as well as refugee and family immigration later on. Among immigrants today, the group of returning Swedish citizens is now the singlemost largest group.

Population by age 1900, 1950, 2013 and 2050

Numbers in 1 000s and percentage of all women and men

Source: Population Statistics, The future population of Sweden 2013–2060, Statistics Sweden

During the 20th century the proportion of older people in the population increased, and now nearly one in five persons are age 65 or older. During the same period the proportion aged 0–19 has decreased. During the 20th century the proportion of those aged 20–64 increased up until the beginning of the 1940s. Then it decreased and from the beginning of the 1960s it has largely been unchanged.

In the future it is expected that every fourth person will be age 65 or older. In 2016 the population will consist of more men than women for the first time.

Population by age 1900, 2013 and 2050

Information about foreign born persons is too uncertain to present

In 1970 many 25-year-olds had already had children. Today most people that age do not have children. Since then childlessness decreases with age and at the end of childbearing ages, 14 percent of the women and 21 percent of the men have not had any (biological) children of their own. This percentage has been relatively constant in recent decades. Men are childless to a somewhat greater extent than women.

Total	33	25	55	48	81	76

Source: Survey of Living Conditions, Statistics Sweden

Women in all age groups report to a higher degree than men that they have long-term disorders or symptoms. In the 45-64 year old age group it is most common for women to have diseases or symptoms of the musculoskeletal system, while it is most common for men to have circulatory diseases. From age 65, high blood pressure is most common for both women and men.

Daily smokers by age 1984–85, 2000–01 and 2012

Smoking and/or using snuff daily 2012

Proportion (%) of age group

Source: Survey of Living Conditions, Statistics Sweden

The proportion of daily smokers has decreased among both women and men between 1985 and 2012. The highest proportion in 2012 was in the age group 45–64 years. This is also the age group where the proportion of women is higher than that of men.

By adding those who use snuff to those who smoke we receive the total use of tobacco. Men outnumber women as tobacco users in all ages.

The level of education for those aged 25–44 has risen significantly between 1985 and 2012, especially for women. In 2012, 51 percent of the women had higher education compared to 1985 when the proportion was 23 percent. The increase for men has not been as large concerning this level of education: 39 percent in 2012 compared with 20 percent in 1985.

The level of education has also increased for those aged 45–64. In 1985 more than half of the women and men only had compulsory education. In 2012 this applied to 14 percent of the women and 19 percent of the men who had this as their highest level of education. The highest level of education that was most common in 1985 was compulsory education, while in 2012 it was upper secondary education for both women and men.

Sex distribution in programmes at upper secondary school is uneven. Only one in five pupils are enrolled in programmes with an even sex distribution. Today the number of men in women-dominated programmes has increased compared to 1986. The corresponding change does not exist for women, that is, the proportion of women in men-dominated programmes is largely unchanged.

 Source: Swedish National Agency for Education

The proportion of women and men who complete upper secondary school within four years has decreased since 1997. The decrease is greatest for pupils with foreign background and especially among men. There is a slight decrease for men with Swedish background, but none for women with Swedish background.

During the same period the difference in grades between women and men has increased. The greatest difference is between women and men with Swedish background. The difference in grades between the two years is largest for women, regardless of background.

Graduates in higher education at first and second cycle studies by field 2012/13

Number and sex distribution (%)

Source: Swedish Higher Education Authority

The most degrees awarded from higher education were in health care and social services. This is also the most common orientation for women and mostly dominated by women with 83 percent women and 17 percent men. The sex distribution was the same in 1985/86.

The most common orientation for men and mostly dominated by men is technology and manufacturing. However, the sex distribution has become more even since the middle of the 1980s and today the proportion of women is 31 percent and the share of men is 69 percent. The women have increased their proportion by 17 percentage points.

TIME USE

Average time use for persons aged 20–64 1990/91, 2000/01 and 2010/11

Hours and minutes

An average weekday

An average weekend day

1 Including lunch and travel to and from work.

Source: Time use study, Statistics Sweden

Time use

Seen over an entire week, women and men aged 20-64 work an average of 8 hours a day. Work refers to both paid work, gainful employment, unpaid work and housework.

On an average weekday, women spend more time on unpaid work than men, about 1 hour. Men spend more time on paid work than women, about 90 minutes.

Since the beginning of the 1990s women have increased their paid working time by about 30 minutes on each weekday, while at the same time men have decreased their paid working time by about 45 minutes.

Women spend 3.5 hours on unpaid work during a weekday, a decrease compared to the beginning of the 1990s by slightly more than 1 hour. Today, men spend 2.5 hours on unpaid work, an increase of 8 minutes.

Seen over an entire week, women are gainfully employed about 30 hours, compared to 27 hours in the beginning of the 1990s. Today men are gainfully employed for an average of 37 hours during the week, compared to 41 hours before.

During a week, women carry out unpaid work for an average of 26 hours, while men spend about 21 hours on the same. In the beginning of the 1990s women spent an average of 33 hours on unpaid work per week, while the corresponding figure for men was 21 hours.

The amount of time spent on various activities in the survey varies considerably, not only between women and men, but also over the different stages of the life cycle.

Days for which parental allowance paid when child is age 2, 1999, 2004 and 2010

Average number of days

 Source: Swedish Social Insurance Agency

The two months that have been reserved for the father have had a considerable effect on women's and men's parental benefit days. In 2010 women on average took 281 days during the child's first two years and men took 59 days.

The first month was reserved for the fathers in 1995, and the percentage of fathers with children up to age 2 who did not take any days at all dropped from 55 to 25 percent one year later. Since then this group has increased somewhat. At the same time the percentage of fathers who took more than 90 days has slowly increased.

Source: The Swedish Social Insurance Agency, Socialförsäkringsrapport 2012:9

Parental allowances 1974–2014

- 1974 Parental allowance is introduced. Benefits comprise 90 percent of wage for 180 days, which must be used up before the child is 8 years old. Parental allowance replaces the previous maternity insurance benefits. Men thus have the right to parental allowance for care of children on the same terms as women.
- Sickness benefit for care of sick children is introduced: 10 days per family and year for children under 10 years old. The benefit is 90 percent of wage.
- 1976 Parental allowance is increased to 210 days.
- 1977 Sickness benefit for care of children is replaced by parental allowance for care of children. The number of days depends on the number of children.
- 1978 Parental allowance is increased to 270 days, of which 30 at the minimum rate only.
- 1980 Pregnancy benefit is introduced and includes women who have physically strenuous work. It can be given from the 60th to the 11th day before delivery.
- Temporary parental allowance can be used for 60 days per child and year, and the age of the child is increased to 12 years.
- The father is entitled to parental allowance for 10 days in connection with the birth of the child, and is compensated at 90 percent of wage.
- 1985 Pregnancy benefit is expanded to also include women working in an environment that may be of risk to the unborn child.
- 1986 The term temporary parental allowance is introduced. The number of parental allowance days is increased to 360.
- 1988 Temporary parental allowance is now paid for a maximum of 90 days per child and year.
- 1989 Parental allowance is given for 450 days, of which 90 with only the minimum rate.
- 1990 Temporary parental allowance is extended to 120 days per child and year.

- 1991 Temporary parental allowance is now paid at 80 percent of wage during the first 14 days per child and year. Afterwards it is paid at 90 percent.
- 1995 At least one month of parental leave must be used by mother and one by father, and the number of days for parental allowance is increased to 450. Thirty days must be used by the mother and 30 by the father. The benefit is 90 percent of wage. The remainder can be used by either parent; 300 days at 80 percent compensation and 90 days at the minimum rate.
- Temporary parental allowance can be transferred from parents to any other person who stays home from work to care for the child.
- 1996 Compensation during the month of parental leave used exclusively by the mother or the father is reduced to 85 percent. 300 days are compensated at 75 percent of wage and 90 days at the minimum rate.
- Temporary parental allowance and pregnancy benefit is reduced to 75 percent of wage.
- 1997 Compensation during the month of parental leave used exclusively by the mother or the father is reduced to 75 percent.
- 1998 Compensation for parental allowance, temporary allowance and pregnancy benefit is increased to 80 percent.
- 2002 Number of days increases with 30 sickness benefit days to 480 days, 60 of which are reserved for each parent and cannot be transferred.
- Temporary parental allowance can be paid to another insured person when the parent is sick and thus can neither work nor take care of her/his child. The 10 so-called "father days" can in certain cases be used by another insured person.
- 2006 The income ceiling for sickness benefit is raised to 10 price base amounts for parental allowance, temporary parental allowance and pregnancy benefit.
- 2007 The income ceiling for sickness benefit is reduced to 7.5 price base amounts for temporary parental allowance and pregnancy benefit. The ceiling for parental allowance is still based on 10 price base amounts.

- 2008 A "gender equality bonus" is introduced when using parental allowance. The bonus applies to parental allowance days at the sickness benefit level, excluding the days that are reserved for each parent. The maximum bonus can be given if these days are shared equally.
- The municipalities are given the right to introduce a municipal "child care subsidy" for children aged 1 to 3 of maximum SEK 3 000 per month.
- 2010 In the case that a single parent becomes sick and cannot take care of her/his child (children under age 3), it is now possible to let someone else who refrains from work to get temporary parental allowance for the care of the child.
- 2012 Double days are introduced for parental allowance. Parents are allowed to receive parental allowance at the same time for 30 days during the first year of the child's life.
- Double days cannot be used as a basis for calculating the gender equality bonus.
- The gender equality bonus in the form of a tax deduction is changed. The requirement to apply for the gender equality bonus is taken away and the bonus entitlement is paid at the same time as parental allowance. This applies to the gender equality bonus for 2012 and onwards.
- 2014 A maximum of 20 percent of the 480 parental allowance days can be saved after the fourth birthday of the child.
- The limit for taking parental allowance days is extended to 12 years.
- The 390 days with parental allowance at the sickness benefit level and the 90 days at the lowest level is divided in half to both parents.

GAINFUL EMPLOYMENT

In this section, a number of terms appear which are explained below:

In the labour force: individuals who are either employed or unemployed.

Not in the labour force: individuals who are neither employed nor unemployed.

Employed: individuals who have gainful employment for at least one hour in the reference week or who have been temporarily absent from work.

Unemployed: individuals who have no gainful employment and actively seek work.

Employment rate: percentage of employed persons of the population.

Time actually worked: The number of hours the person worked during the reference week.

Hours normally worked: working time the person should have worked as agreed.

Absent: individuals who have a job, but have not performed that job because of vacation, illness, parental leave, studies, military service, etc.

Economic activity rate: the percentage (%) of the population in the labour force.

Unemployment rate: the percentage (%) of unemployed persons in the labour force.

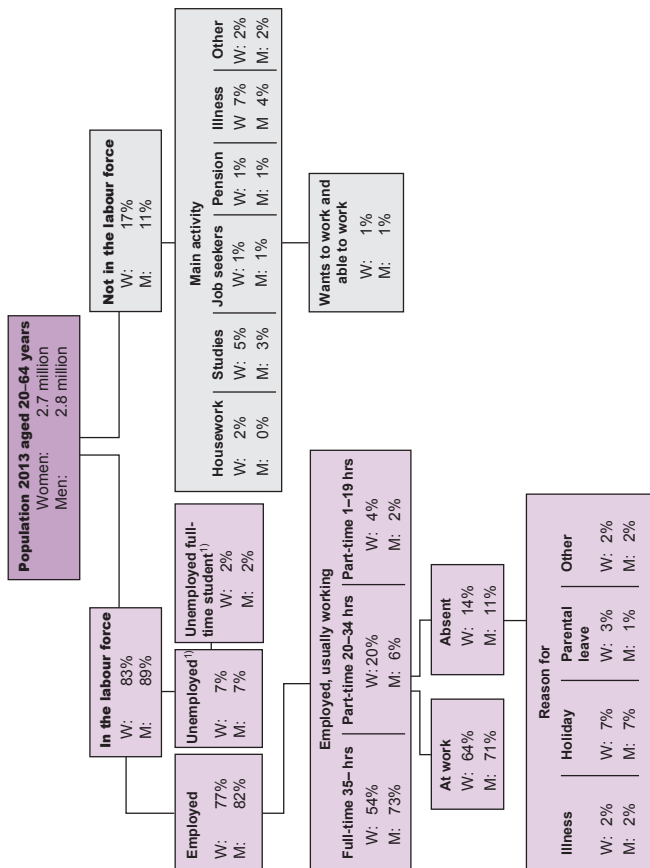

Hidden unemployed: individuals who want and can work but who have not been seeking work.

Underemployed: individuals who want to increase their working time and can begin to work more.

Since 2005, individuals who are registered in Sweden and who work abroad are included as employed in the Labour Force Survey. Previously these individuals were not included in the labour force. Since 2007, individuals who are full-time students and who have looked for work and been able to work are included as unemployed. The changes that occurred implied that there were time series breaks, but the tables and figures have been re-calculated back to 1987. This is illustrated in the relevant figures with a vertical line.

Population aged 20–64 in and not in the labour force 2013

Proportion (%) of the population¹⁾ in different groups

1 Unemployed persons are presented as a percentage of the labour force

Source: Labour Force Surveys, Statistics Sweden

Women aged 20–64 by activity status and hours normally worked 1970–2013

Source: Labour Force Surveys, Statistics Sweden

The rate of gainful employment rose among women between 1970 and 1990. During the 1990s, gainful employment dropped and then began to increase somewhat up until the middle of the 2000s. During the 1970s and 1980s the proportion working on a long part-time increased. At the same time, the proportion of those working full-time increased during the 1980s. In the 1990s unemployment rose while the proportion of those working full-time or on a long part-time basis dropped. From the beginning of the 2000s the proportion of women working full-time increased.

In 2013, the economic activity rate for women aged 20–64 was 81 percent and the unemployment rate was 6.8 percent.

Men aged 20–64 by activity status and hours normally worked 1970–2013

Source: Labour Force Surveys, Statistics Sweden

The rate of men's gainful employment remained at the same level between 1970 and 1990. Unemployment increased from the beginning of the 1990s and remained at a high level up until the beginning of the 2000s, and then decreased somewhat. From the beginning of the 1990s the percentage of those working full-time dropped and has remained at about the same level. In the middle of the 2000s a weak increase began in the percentage of those working on a long part-time basis.

In 2013, the economic activity rate of men aged 20–64 years was 89 percent and the unemployment rate was 7.4 percent.

Economic activity rate by region of birth and age 1987, 2000 and 2013

Proportion (%) of the population in the labour force

Source: Labour Force Surveys, Statistics Sweden

Gainful employment for those aged 25–44 was in total higher for both women and men in 1987 than in 2013. In 2013 the economic activity rate for men was 90 percent or higher, regardless of region of birth, except for Africa with 89 percent. The economic activity rate for women varied from 63 to 91 percent.

Gainful employment for those aged 45–64 was generally lower for both women and men in 1987 compared to 2013. The economic activity rate for women and men who come from Europe outside the Nordic countries was lower in 2013 than in 1987. The same applies to men who were born in Asia and Africa.

Employment rate by age 1987, 2000 and 2013

Proportion (%) of employed persons of the population

Source: Labour Force Surveys, Statistics Sweden

The employment rate for the entire age group 20-64 is high for both women and men in 2013 at 77 and 82 percent respectively. Even so, it has dropped since 1987 for both women and men for all age groups except the 55-64 year group. In contrast, the employment rate for that age group has increased for both women and men.

Employed persons aged 20–64 by sector 1970–2013

Source: Labour Force Surveys, Statistics Sweden

The break in the curves is due to a new measuring method introduced in 1987. All who worked in limited companies were classified as employees before 1987. Thereafter company leaders were classified as self-employed.

Information for 1970–1986 refers to the age group 16–64 years.

During the 1970s and 1980s the number of women on the labour market increased in the public sector. As of 2000, more women work in the private sector than in the municipality sector. A weak increase has occurred for self-employed persons since the middle of the 2000s.

Men work mainly in the private sector. After a weak increase up until the 1990s, the number of self-employed persons has been at a relatively stable level.

The decrease in the central government sector is partly due to cutbacks in staff, as well as to the transformation of public utilities into commercial enterprises during the 1990s. Employees at those commercial enterprises are included in the private sector.

Employed who work part-time by age 1987, 2000 and 2013

Numbers in 1 000s

Source: Labour Force Surveys, Statistics Sweden

In 2013, 30 percent of the women worked part-time. This percentage has decreased from 45 percent in 1987. During the same period the percentage of men who work part-time has increased from 6 to 11 percent. Since 1987, the percentage of women who work part-time has dropped for all age groups except those aged 20-24. Among men the percentage of part-time workers has increased somewhat except for those aged 55-64, where it has been at the same level during the entire period.

Employed parents aged 20–64 who work part-time by number of children and age of youngest child 1987, 2000 and 2013

11–16 years	54	5	44	8	40	..

1 Employed also includes those who are absent, e.g. on parental leave.

Source: Labour Force Surveys, Statistics Sweden

A large proportion of parents, mothers as well as fathers, work part-time when the youngest child is 1–2 years old. This applies to all years.

When the youngest child is aged 3–5 and many children are in pre-school, the share of part-time work for the mother increases with the number of children. This applies to all years. There is a slight change in the part-time work of fathers, about one percentage point.

When the youngest child is 6–10, the proportion of mothers who work part-time increases with the number of children, but decreases significantly between the years. There is also a slight change in the proportion of men who work part-time.

When the youngest child is 11–16, there is still a large proportion of the mothers who work part-time.

Reason for part-time work for persons aged 20–64, 2005 and 2013

Numbers in 1 000s

Source: Labour Force Surveys, Statistics Sweden

Actual and usual amount of time worked per week for employed persons aged 20–64, 1987 and 2013

Source: Labour Force Surveys, Statistics Sweden

Women in nearly all groups and both years have greater differences between actual and usual time worked than men do. The largest difference is for the cohabiting women with children under age 7. In nearly all groups, women have increased their working time, both the actual and usual time worked between 1987 and 2013. Instead, men have decreased their working time. The exception is single women without small children and single men with small children.

Gainfully employed persons and work environment for persons with disabilities¹⁾ and others in the population aged 16–64, 2008–2011

The number of temporary employees has increased between 1987 and 2013, both for women and for men. In the 2013, 57 percent of temporary employees were women and 43 percent were men.

The most common type for women in both 1987 and 2013 was a temporary replacement position. The percentage has decreased from 67 to 25 percent.

In 1987 the most common type for men was project employment, 32 percent, and in 2013 it was 14 percent. In 2013 it was most common to be paid by the hour with schedule for a certain period, 20 percent.

The 30 largest occupations 2012

Number and sex distribution (%). Ranked by number of persons in each occupation

Source: Occupational Register, Statistics Sweden

Sex distribution within the 30 largest occupations in 2012

Of all those employed aged 20–64, 58 percent of the women and 39 percent of all men work in the 30 largest occupations. Only three occupations have an equal sex distribution, i.e. 40–60 percent of each sex. These are: *Chefs and cooks*, *Doctors* and *University/higher education teachers*. The most women-dominated occupation is the category for Assistant nurses, hospital ward assistants etc. with 93 percent women and 7 percent men. The most men-dominated occupation is the category for Carpenters, joiners etc. with 1 percent women and 99 percent men.

Source: 1985 Population and Housing Census, 2001 Labour Force Survey, 2012 Occupational Register

The labour market is highly segregated by sex. Only 14 percent of the employed women and 5 percent of the employed men have occupations with an even distribution of the sexes. However, an increase has occurred for both women and men since 1985. In 1985, 6 percent of the women and 5 percent of the men have occupations with an even distribution of the sexes.

72 percent of the women have occupations that are dominated by women and 68 percent of the men have occupations that are dominated by men. A decrease has occurred since 1985. At that time, 77 percent of the women had occupations that were dominated by women and 83 percent of the men had occupations that were dominated by men.

36 percent of self-employed persons in 2012 were women, 64 percent were men. This is a small change compared to 2007, which is the first year that has comparative information.

In all but two industries Education together with Financial services, business services sex distribution is uneven. Social work and Personal and cultural services are women-dominated while the other eight industries are men-dominated.

Compared with 2007, the number of women who are self-employed has increased by 2 000 while the number of men has decreased by 10 000. It is most common that both women and men do not have employees in the company.

Source: Labour Force Surveys, Statistics Sweden

The number of women and men who are not in the labour force, that is, are neither employed or unemployed, has increased since 1987. In 1987 the most common reason that women were not in the labour force was because of housework. The reason for men was because of studies.

In 2013, illness was the most common reason among both women and men. The proportion in 1987 was 7 percent for women and 13 percent for men, and increased to 41 percent for women and 39 percent for men in 2013.

2012	94	99	75	94	91	94	88	92	86	93

Unw = Unweighted

We = Weighted

1 Weighted values take into account the differences between women and men in age, educational background, full-time/part-time, sector and occupational group.

 Source: Wage and salary structures, National Mediation Office and Statistics Sweden

When looking at the entire labour market, women have 86 percent of men's pay. In the middle of the 1990s the corresponding figure was 83 percent. The change shows a slight decrease in salary differences between women and men.

When consideration is taken to women's and men's different ages, education, working hours, the different sectors and occupational groups, women's pay is 93 percent of men's pay. This figure has been about the same since the middle of the 1990s. The greatest differences are in the private sector, the smallest in municipalities.

The most important explanation for the differences in pay is that women and men have different occupations.

INCOME

Total earned income for persons aged 20 and older by age 2000 and 2012

Median income in SEK 1 000s and prices from 2012

 Source: Income and tax register, Statistics Sweden

Note that the graph does not show income changes over the life cycle, but the median income of individuals in a specific age group in 2000 and 2012.

Total earned income is the taxable income excluding income on capital.

Total earned income for persons aged 20–64 in 1991, 2000 and 2012

SEK 1 000s and prices from 2012

with children	156	134	187
of which 1 child	158	135	197
at least 2 children	129	132	162

1 Consumption units are calculated taking into account scale benefits and variations in expenditure on children due to their age. This is to enable comparisons of economic standards between different types of households.

 Source: Households' finances, Statistics Sweden

Disposable income is the sum of all income and positive transfers (such as children and housing benefits and social security) minus final taxes.

Cohabiting adults without children have the highest disposable incomes. Cohabiting adults with children have the next highest disposable incomes. This applies to all years. Single women with children have the lowest disposable incomes. The income difference between cohabiting adults with one child and single women respectively single men with one child has increased since 1991 in terms of Swedish kronor. The increase has been larger for women than for men.

Households receiving economic assistance by type of household 1985, 2000 and 2012

Number and proportion (%) of all in each group

In 87 percent of all assault cases, the perpetrator was a man and in 60 percent, the victim was also a man. In 27 percent of the cases, the victim was a woman.

When men are subjected to assault, it usually occurs in a public place. When women are subjected to assault, the crime scene is usually in the home or at the workplace/school.

If the perpetrator is a woman, the victim is also in most cases a woman.

Gross violation of a woman's integrity

Violence against women in close relationships often consists of repeated violations. A man who subjects a woman (with whom he has had a close relationship with) for repeated violations can be sentenced with gross violation of a woman's integrity. In 2013, 2 136 cases were reported.

Source: National Council for Crime Prevention

Reported assaults 1990–2013

Number of reported crimes against victims 15 years and above

The addition of the offence of gross violation of a woman's integrity to the legislation in 1998 can influence comparability over time. For instance, repeated cases of assault in a close relationship since 1998 can lead to a report of gross violation of a woman's integrity instead of a report of assault.

 Source: National Council for Crime Prevention

The number of reported cases of assault against women as well as against men has increased over time. Among other things, this may be due to a greater tendency to report crimes of violence, i.e. that the hidden statistics have become fewer. The hidden statistics refer to the ratio of the actual number of crimes and the reported number of crimes. The hidden statistics drop if a larger proportion of the crimes committed are reported. In those cases where the perpetrator is closely related to the victim, the hidden statistics are probably considerable.

In 2012, 36 percent of managers were women and 64 percent were men. The corresponding information in 1995 was 26 and 74 percent respectively.

The sex distribution in the private sector was 20 percent women and 80 percent men in 1995. This indicates a slight change towards a more even sex distribution.

The sex distribution in the public sector has gone from 43 percent women and 57 percent men in 1995 to be women-dominated in 2012.

WOMEN and MEN in Sweden

Facts and
figures 2014

Gender equality 30 years on

The renowned booklet "Women and Men in Sweden" was first published in 1984. We are now able to follow the development of gender equality over a 30 year period. Important issues during the 1980s included subjects like the dividing of unpaid work and parental responsibility for women and men. Are both women and men becoming more economically independent? Who has power and influence? Issues that are still current today. This edition of the booklet provides a view of the situation then and what things look like today in many areas.

We begin with a description of gender equality since the 1980s on a broad scale in text as well as figures. Women and men are presented side by side in carefully formatted tables and graphs, sometimes with short comments.
