

Two-Factor Authentication

A two-factor authentication is implemented for users logging in to IDEP.WEB in order to enhance login security.

How to log in:

1. Use your username and password, press "Login".
2. In the next step, you will be asked to confirm your email address which is registered in contact details. When logging in for the first time, two-factor authentication is not required since no e-mail address is registered. If you have different people entered as a contact person, all the email addresses that are registered can be used for authentication. This must be done on the same computer that the login takes place on.
3. Check the box if you want to skip email authentication on this browser for the next 20 days.
4. Then press "Login". See below.
