# Experience of going from .STAT to PxWeb

Kadri Naumanis

Marketing and Dissemination Department

Statistics Estonia

#### **Statistical Database**

File-based PxWeb – main database

PxWeb SQL – foreign trade statistics

4,700 datasets (incl 2,600 discontinued datasets)

 4 main statistical domains + multidomain statistics and census statistics

https://andmed.stat.ee/en/stat

 Discontinued datasets are presented separately

STATISTICS . ESTONIA

#### **Statistical Database**

#### Statistical database

This database does not contain data tables on foreign trade statistics.

Tables for foreign trade statistics are published in the <u>foreign trade database</u>.

Search

- Environment
- Economy
- Population
- Social life
- Multidomain statistics
- Population and Housing Census
- Discontinued datasets

#### Foreign trade database

This database only contains data tables on foreign trade statistics. Tables for other domains can be found in the <u>statistical database</u>.

Search

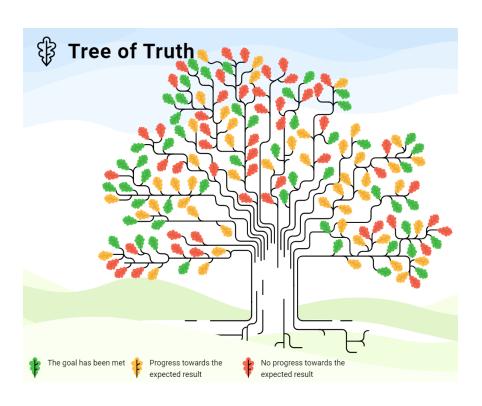

- Economy
  - Foreign trade
    - Foreign trade in goods
    - Foreign trade in goods by enterprise characteristics (TEC)
    - Foreign trade in service

# **Issues regarding .STAT**

Security issues

Performance issues

Timeouts when handling large datasets

Embargo

Archiving solution

Data visualisation

STATISTICS ESTONIA

# **Issues regarding .STAT API**

- Since API requests could only be made with GET request, the maximum allowed URL length was a problem in case of more complex requests (many value codes specified in the request).
- For larger API requests, timeouts were encountered.

Both issues had a workaround.

# **Closing down .STAT**

From March 2023 onwards, data in this database are no longer updated. Official statistics can be found at andmed.stat.ee.

All datasets

Although all the issues were reported, no solutions were found.

**STATISTICS ESTONIA** 

#### **Lessons Learned**

- Learning curve can be quite steep.
- Getting used to the new database takes time.
- Users need help and support.

STATISTICS . ESTONIA

### Feedback for PxWeb

Displaying hierarchical dimensions

Searching a large number of elements from long code lists

Thorough documentation

STATISTICS . ESTONIA

#### Feedback for PxWeb API

- In an API data request, it is not possible to specify decimal places for the data, only the data as it is displayed by default in the user interface can be received via the API. This means that if the dataset in the cube is actually of higher precision, it cannot be retrieved via the API.
- The notes information included in the response to an API request depends on the response format selected, and other formats are not equivalent to the PX format in terms of notes.
- It is not possible to get statistical data from API using GET request.

## **Plans for the Future**

- Harmonised metadata
- All datasets are described in the metasystem
- Automated dissemination procedure
- Study videos for PxWeb

# Thank you!
