

# Current work and the road ahead

Petros Likidis, Statistics Sweden

# PxWeb roadmap

# Roadmap

- PxWin
- PxWeb
- PxWeb API 2.0
- "PxWeb 2.0"

# “PxWeb 2.0”

Motivation: The technology used for PxWeb (ASP.NET Web Forms) is reaching its end of life.

- Rewrite of the user interface in a different technology.
- Same functionality as now
- Based on the PxWeb API 2.0.

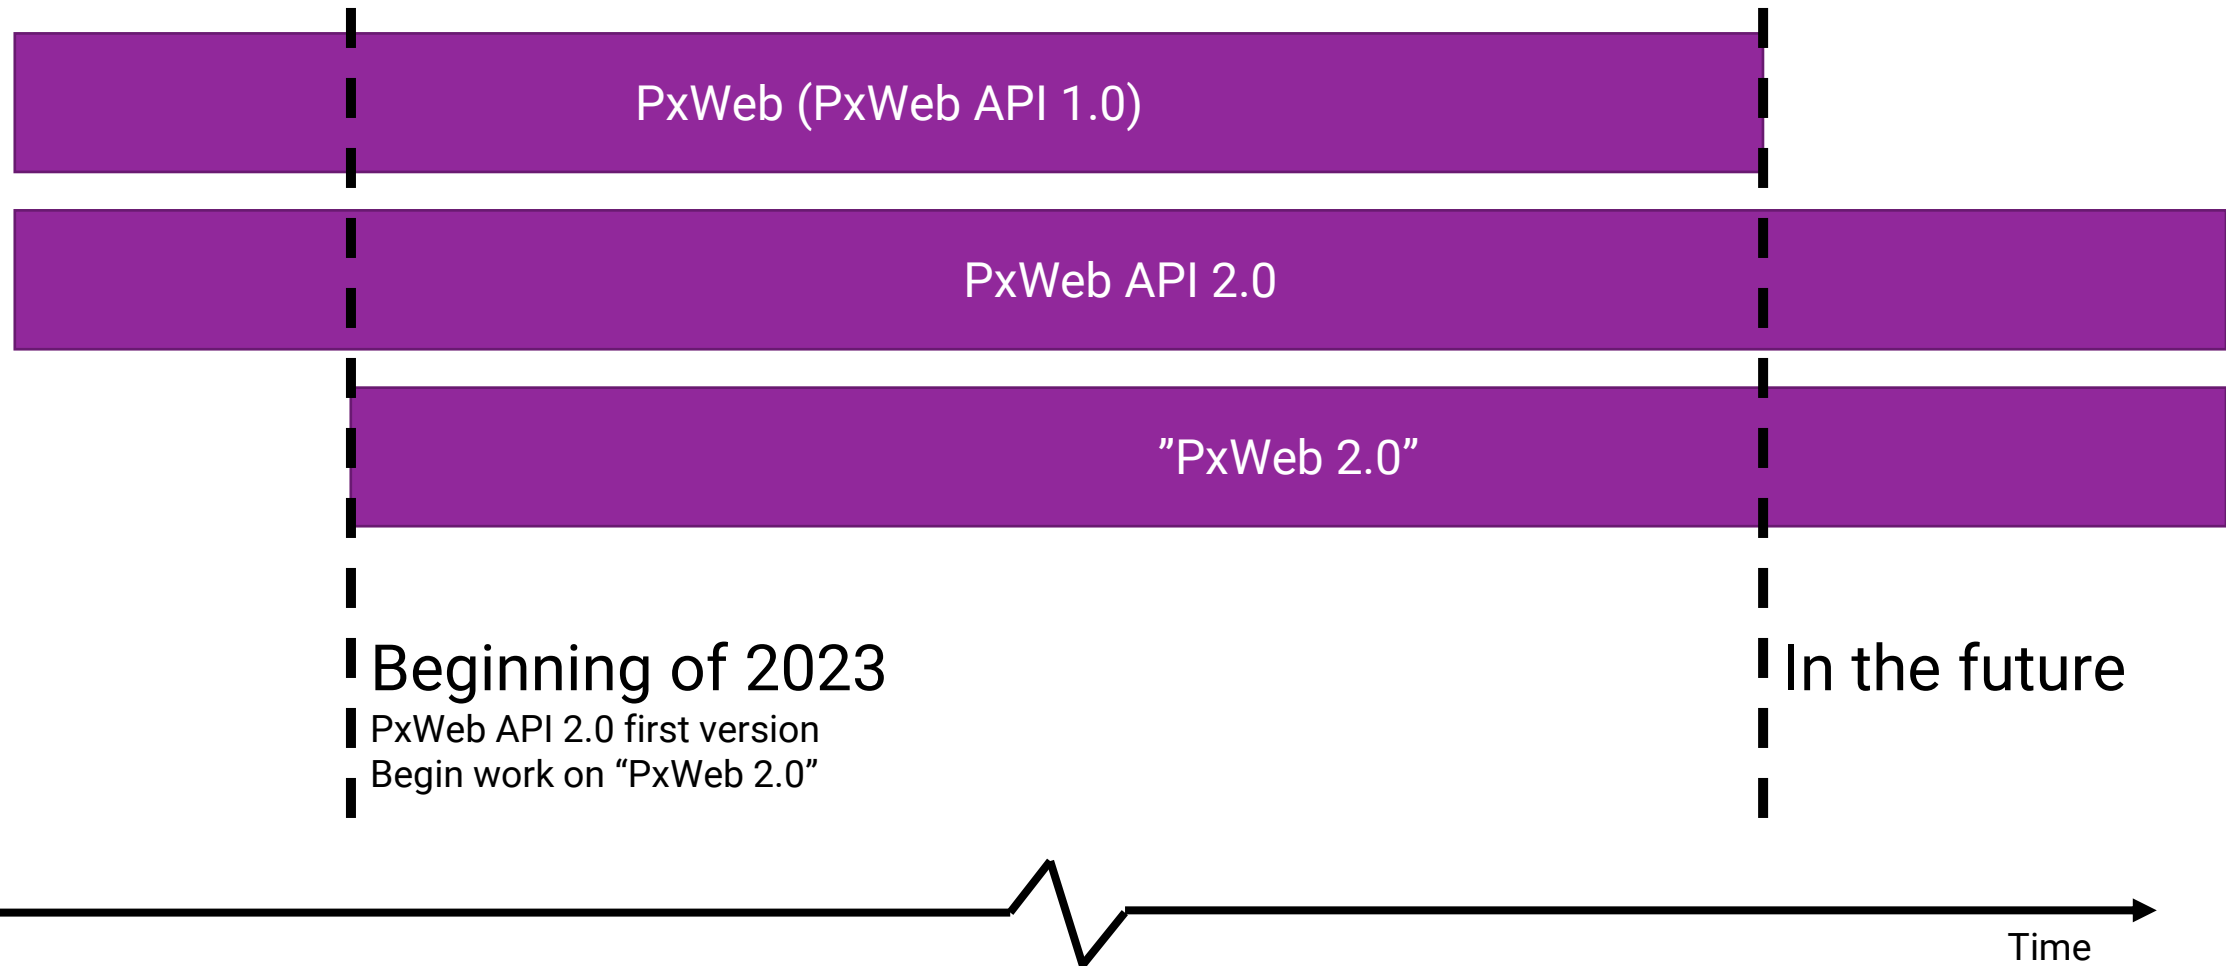

# “PxWeb 2.0”

- **Technology study**
- **Specify the UI**
- **Basic infrastructure**
- **Structure of the admin UI**
- **Search view**
- **Navigation view**
- **Selection view**
- **Table view**
- **Save as**
- **“Reselection”**
- **Preform operations**
- **UI för API helper**
- **Saved query**
- **Charting**

# Roadmap

# PxWeb API 2.0

# Motivations

- Change the structuring of [URL:s](#) so that they become more resilient to change and conforms better to a RESTful design.
- More metadata will be exposed through API calls.
- User experience for fetching data will be improved.
- More advanced features to filter data will be provided.

# Current status

- Defining the specification of PxWeb API 2.0 using the OpenAPI specification. The specification is available at <https://github.com/statisticssweden/PxApiSpecs>
- Implementing the API endpoints. The code is available at <https://github.com/statisticssweden/PxWeb/tree/pxapi2/master>

# PxWeb API 2.0 design choices

- One database (CNMM/PX)
- Folder name should be unique
- Responses should be self-described
  - Links
  - Languages
- .NET 6 (might run on Linux)

## Example

+ Doublecolumn

+ error

/navigation

# /navigation /navigation/{id}

## Used for browsing the database

- Show the content of one level in the database
- Content can be:
  - Subfolders
  - Tables
  - Headings

```
{
  "id": "START",
  "objectType": "Folder",
  "label": "",
  "description": "",
  "tags": null,
  "links": [
    {
      "rel": "self",
      "href": "http://pxapi2-master-cnmm.scb.se/v2/navigation/START"
    }
  ],
  "folderContents": [
    {
      "id": "AA",
      "objectType": "FolderInformation",
      "label": "Statistik AA",
      "description": "Detta är statistik för AA",
      "tags": null,
      "links": [
        {
          "rel": "folder",
          "href": "http://pxapi2-master-cnmm.scb.se/v2/navigation/AA"
        }
      ]
    },
    {
      "id": "AB",
      "objectType": "FolderInformation",
      "label": "Statistik AB",
      "description": "",
      "tags": null,
      "links": [
        {
          "rel": "folder",
          "href": "http://pxapi2-master-cnmm.scb.se/v2/navigation/AB"
        }
      ]
    }
  ]
}
```

## Example

+ error

# /tables

Used for finding the right table in the database

- Lists information about all tables in the database
- Is pageable
- Can be filtered on:
  - a search criteria
  - since it was last updated
  - if table is *discontinued*

```
{
  "language": "sv",
  "tables": [
    {
      "id": "Testtable1",
      "objectType": "Table",
      "label": "Testtabell 1",
      "description": "Det här är testtabell nummer 1",
      "updated": "2022-08-17T00:00:00",
      "category": "official",
      "firstPeriod": "2016",
      "lastPeriod": "2019",
      "discontinued": false,
      "tags": null,
      "links": [
        {
          "rel": "self",
          "href": "http://pxapi2-master-cnmm.scb.se/v2/table1"
        },
        {
          "rel": "metadata",
          "href": "http://pxapi2-master-cnmm.scb.se/v2/table1"
        },
        {
          "rel": "data",
          "href": "http://pxapi2-master-cnmm.scb.se/v2/table1"
        }
      ]
    }
  ],
  "pages": {
    "pageNumber": 1,
    "pageSize": 20,
    "totalElements": 1,
    "totalPages": 1,
    "links": [
      {
        "rel": "self",
```

# Examples

List tables that has been updated the last 5 days

`/tables?pastDays=5`

List tables that contains something with Örebro

`/tables?query=Örebro`

List tables that has been updated the last 5 days and that contains something with Örebro

`/tables?pastDays=5&query=Örebro`

## /tables/{id}

**Used for listing the information about a table**

- Gives short information about the table
- Also links to where to fetch
  - Data
  - Metadata

```
{
  "id": "Testtable1",
  "objectType": "Table",
  "label": "Testtabell 1",
  "description": "Det här är testtabell nummer 1",
  "updated": "2022-08-17T00:00:00",
  "category": "official",
  "firstPeriod": "2016",
  "lastPeriod": "2019",
  "discontinued": false,
  "tags": null,
  "links": [
    {
      "rel": "self",
      "href": "http://pxapi2-master-cnmm.scb.se/v2/t"
    },
    {
      "rel": "metadata",
      "href": "http://pxapi2-master-cnmm.scb.se/v2/t"
    },
    {
      "rel": "data",
      "href": "http://pxapi2-master-cnmm.scb.se/v2/t"
    }
  ]
}
```

women

# /tables/{id}/metadata

Used for listing detailed information about a table

- List all variables and values and all other metadata needed to be able to fetch data
- Also links to where to:
  - Fetch data
  - Where to get information about codelists
- 2 output formats
  - Custom JSON
  - JSON-STAT2 + extensions

# /tables/{id}/codelists

Used for listing codelists, that is aggregations and valuesets associated with the table

- Gives short information about the codelist
- Also links to where to fetch detailed information of the codelist

```
{
  "language": "sv",
  "codelists": [
    {
      "id": "vs_RegionKommun07",
      "label": "Kommuner",
      "links": [
        { "rel": "metadata", "href": "https://my-site."
      ]
    },
    {
      "id": "vs_RegionLän07",
      "label": "Län",
      "links": [
        { "rel": "metadata", "href": "https://my-site."
      ]
    },
    {
      "id": "vs_RegionRiket99",
      "label": "Riket",
      "links": [
        { "rel": "metadata", "href": "https://my-site."
      ]
    },
    {
      "id": "agg_RegionA-region_2",
      "label": "A-regioner",
      "links": [
        { "rel": "metadata", "href": "https://my-site."
      ]
    },
    {
      "id": "agg_RegionKommungrupp2005-_1",
      "label": "Kommungrupper (SKL:s) 2005",
      "links": [
        { "rel": "metadata", "href": "https://my-site."
      ]
    }
  ]
}
```

# /tables/{id}/codelist/{codelist\_id}

Used for listing detailed information about a codelist

- Shows all codes and values for a codelist and how that values maps to the original value.

```
{
  "id": "agg_RegionNUTS2_2008",
  "label": "NUTS2 fr.o.m 2008",
  "language": "sv",
  "values": [
    {
      "code": "SE11", "value": "Stockholm",
      "valueMap": ["01"]},
    {
      "code": "SE12", "value": "Östra Mellansverige",
      "valueMap": ["03", "04", "05", "18", "19"]},
    {
      "code": "SE21", "value": "Småland med öarna",
      "valueMap": ["06", "07", "08", "09"]},
    {
      "code": "SE22", "value": "Sydsverige",
      "valueMap": ["10", "12"]},
    {
      "code": "SE23", "value": "Västsverige",
      "valueMap": ["13", "14"]},
    {
      "code": "SE31", "value": "Norra Mellansverige",
      "valueMap": ["17", "20", "21"]},
    {
      "code": "SE32", "value": "Mellersta Norrland",
      "valueMap": ["22", "23"]},
    {
      "code": "SE33", "value": "Övre Norrland",
      "valueMap": ["24", "25"]}
  ]
}
```

| 06 Jönköping county    | 166,405 | 167,205 | 167,218 | 168,028 |

### Obs:

The tables show the conditions on December 31st for each respective year according to administrative subdivisions of January 1st of the following year

### region: 03 Uppsala county

Since 1 January 2007, Uppsala county has been expanded to include Heby municipality. Please note that the figures for the county are not comparable with earlier figures.

# /tables/{id}/data

Used for fetching the data in different formats.

- The same formats as in PxWeb will be supported but should be configurable.
- Supports fetching data through HTTP GET and POST methods
- More advanced ways to express what to fetch.

# Selection expressions for fetching data

Selection expression is in the form

```
valueCodes[variable_code]=value_expresion1,  
value_expression_2, ...
```

Value expressions are either the value code or special expressions.

Special variable alias for time

# Value expressions

- \* - zero or many characters.
- ? - exactly one character.
- **TOP(N)** – First N number of values.
- **BOTTOM(N)** – Last N number of values.
- **RANGE(X,Y)** – From value with code X to value with code Y.
- **FROM(X)** - From value with code X and all values after.
- **TO(X)** From the first value to the value with code X.

# CodeList

- We can apply a different codelist for the variable and use them either for making selection of single values easier or to select aggregates

```
codelist[region]=agg_RegionNUTS_2008  
outputValues[region]=aggregated (default) | single
```

```
variable_code = region  
SE11  
SE12  
SE21  
SE22  
SE23  
SE31  
SE32  
SE33
```

# Example

```
codelist[region]=agg_RegionNUTS_2008  
valueCodes[region]=SE11,SE12
```

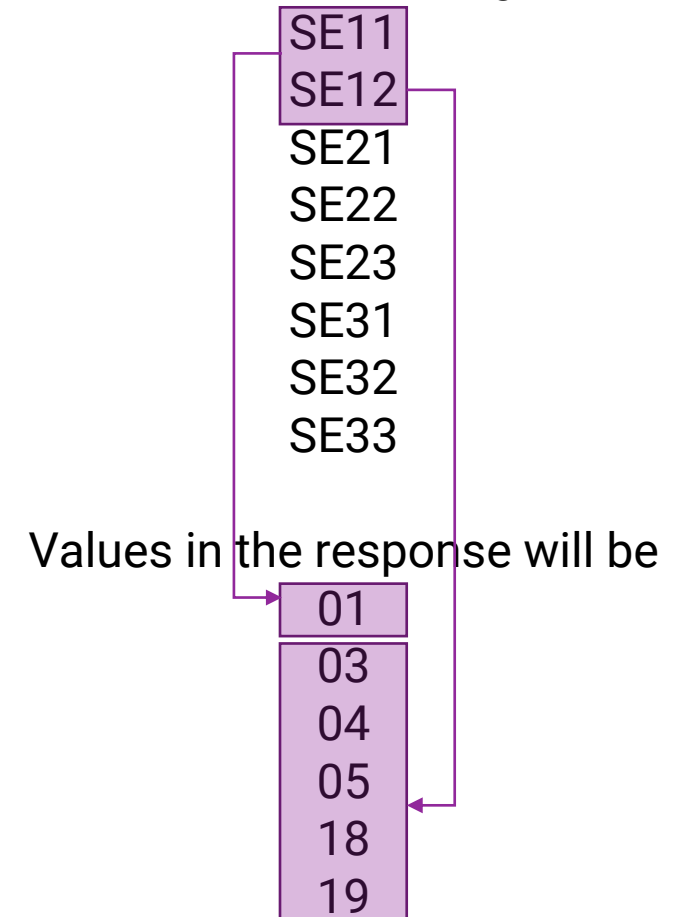

variable\_code = region

|      |
|------|
| SE11 |
| SE12 |
| SE21 |
| SE22 |
| SE23 |
| SE31 |
| SE32 |
| SE33 |

# Example

```
codelist[region]=agg_RegionNUTS_2008  
outputValues[region]=singel  
valueCodes[region]=SE11,SE12
```

variable\_code = region

# /config

- Will display settings for the the API

```

# Demo sites

We have two demo sites up and running one for PX databases and one for CNMM

<https://pxapi2-master-px.scb.se/>

<https://pxapi2-master-cnmm.scb.se/>

They are continuously updated as new functionality is available

# Admin API

We will have an admin API for common tasks that can be used to automate some of the recurrent works. Like what we have in PxWeb

SCB
